The online format of the lecture due to Covid makes it way harder to stay concentrated during the lecture. The video format of the exercise is very good and understandable.

Guest

Sometimes the examples given in the Lectures after the theoretical parts were discussed, e.g. bandwidth extension were a bit hard to follow. Maybe introduce the basic concept of the neural networks before making the bandwidth extension example with them.

Guest

- organizational: The choice to have one round of student talks before christmas and one at the end of the lecture period lead to a large imbalance for the two appointments (5 vs 16 talks). This is understandable, as some core concepts were not introduced before the first date, and leads to an extremely long event quite shortly before the end of term. - content: the topic of neural networks and especially the basic layer structures for CNNs (convolutional layers, pooling layers) could/should have been explored more deeply to get an insight with a "basic" architecture into how more complex architectures (often times using the same building blocks) can be approached.
